

A DevOps frame of mind

DevOps redefines the relationship between development and operations, removing the proverbial partition between these traditionally siloed teams and shortening the software development lifecycle. DevOps teams are leaner and meaner and give organisations a cost-effective and time-saving solution to business automation.

BBD has been instrumental in shifting multiple clients to the DevOps culture for creating and maintaining solutions. There have been noticeable benefits for each client across the various sectors we are involved in and through insightful consulting, we are able to adapt the model to what will work best for your organisation.

This culture shift is about creating a mindset that encourages individual ownership and quick turnaround times, increased profitability, improved overall productivity and ensuring a continuous delivery of value.

DevOps offers

- Secure and stable infrastructure
- Faster time to market
- Iterative development Increased efficiency
- Perpetual delivery pipeline
- Added value for clients and employees

Benefits of DevOps

- Continuous deployment with minimal client impact
- Continuous and rapid innovation
- Proactive monitoring and remediation of issues
- Culture of ownership, transparency and learning

Shifting to DevOps

BBD's expert DevOps practitioners work alongside your internal teams to ensure the shift to a DevOps way of working is easy. It also means that each member of your team feels empowered by this effective and collaborative approach to development and delivery.
