BBD's core solution offering

End-to-end solutions, no matter your
tech stack or sector.

Core services

At any stage in the cycle, our team of experts can step in to assist in advising, developing and implementing solutions that help your organisation meet your business objectives through modern approaches and a commitment to removing your technical challenges.

Digital strategy

Starting with an analysis of your technological and business landscape, we create and integrate new and existing solutions that will optimise your business processes.

How we roadmap your digital future:

- Audit and map out your business' unique strategy and goals
 - Examine current environment, assessing all platforms and channels
 - Assess which parts of your business can be made digital
 - Identify which existing processes and services which can be automated and optimised
 - Identify which systems can be integrated and streamlined
 - Introduce new channels and technologies which can better business outcomes
-

Tech & business consulting

Utilising digital health assessments performed by our specialist R&D team, we can then help you realise your digital strategy through technology, advising on best the approaches and tech for your unique environment.

Why trust us

- Team of experts including technologists, business consultants and analysts offering specific skills across different various technologies and domains
 - Extensive experience leveraged for unique input on projects across industries
 - In-depth industry specific experience such as the financial services sector includes niche knowledge on topics such as tax, risk and regulatory compliance, and capital markets
-

We provide end-to-end services that deliver scalable, secure and reliable cloud solutions – whether moving to the cloud, optimising cloud operations or scaling your environment.

What we offer:

- Cloud architecture and solution design
- Modernisation and cloud migration
- Cloud optimisation
- AWS and Azure services and solutions
- Managed cloud services
- Managed platform services

One size doesn't fit all. We'll work closely with you to optimise, automate and realise your differentiated strategy with custom designed software and systems that meet your needs.

What you get:

- Highly skilled Agile software development teams specialising in complex projects
- Improved effectiveness
- Benefit of our experience on projects of all scale and complexity
- Work delivered globally through remote teams – meaning the best global skills
- Customised and accelerated delivery
- After action satisfaction
- Maintenance and support
- All software is designed and delivered using best practice principles
- Leverage off of our long-standing track record and culture of delivery

To increase efficiency and reduce costs, we can integrate new and existing platforms into your environment, addressing the challenges that arise from integrating the combination of off-the-shelf, legacy and custom software that technical architectures typical require.

Why trust us:

- Reduced operational costs
 - Improved response time
 - Maintenance and support
 - Seamless functionality
 - Improved product quality and performance

Maintenance & support

Whatever stage of development your system and processes are in, we can use best practices to support and maintain them - maximising programs, increasing productivity and reducing downtime.

What you get:

- Support retainers for any emergency situations that may arise
- Billing solutions and cost optimisation for lowered total cost of ownership
- Consistency and stability for applications and their environment
- Modernised environments
- Reduced technology risk
- More than just bug fixing, option for constant innovation to ensure your systems are modern and running optimally

Service extensions

Evolving in line with the needs of our clients and the market, we offer specialist skills that can be utilised within a larger project, or as a stand-alone offering.

Data science & machine learning

We offer data architecture, engineering and analytics, including advanced analytics like machine learning and artificial intelligence, services to help you make sense of your data and leverage insights for additional business value.

User experience / user interface design

Based on extensive user research, proven human-centric design principles and your intended customer experience in line with your overall brand and key objectives, we craft and develop meaningful UX and UI to offer additional value to your business.
